                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a human polypeptide which is a potent angiogenesis inhibitor, designated KED. The KED polypeptide, kringle proteins, or a kringle derived from human tissue plasminogen activator (tPA) protein are used to inhibit angiogenesis. Kringle protein, KED or tPA are useful for treating tumours, as well as atherosclerosis, arthritis, retinopathy and other similar diseases. KED is also useful for the treatment of diseases such as bronchial vascular congestion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACAGCATCGTGCGCCGCCCGACCGCACCGGGGTGCCCGTCGTCAACCTCAGGGACGAGG

                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, poriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin coding sequence.

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               618

RESULT 3

```
a signal sequence, an immunoglobulin Fc region, an anglogenesis including a gignal sequence, an immunoglobulin Fc region, and an anglogenesis inhibitor selected from anglostatin, endostatin, a plasminogen fragment having anglostatin activity, a collagen XVII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit anglogenesis and to treat diseases or conditions mediated by anglogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign trachomas and pyrogenic reamanglomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rheumatoid arthritis, psoriasis, coular anglogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental confibroma, wound granulation, telangiectasia, haemophiliac joints, anglodibroma, wound granulation, telangiectasia, haemophiliac joints, endostand granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a DNA encoding canine immunolominic containing canine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 341

An isolated nucleic acid molecule for the treatment of angiogenesis-related disorder, such as cancers or diabetic retinopathy. 36; 56pp; English. encodes an endostatin protein -Examples; Page

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration,

Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in tissue sample liver

Claim 1; SEQ ID NO 713; 298pp; English.

progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN9455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, The invention relates to a novel method for diagnosing and detecting the printed drug toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the pr
specification, but was obtained in electronic format directly from

(HUMA-) HUMAN GENOME SCI INC.

Birse CE, Rosen CA;

2002-147878/19. P-PSDB; ABP42508 Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases

Claim 1; SEQ ID No 1465; 2922pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP4328) and to cDNAs encoding them (ABG54131-ABG5305), and also encompasses polypeptides 90% identical and polyuacleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens of polyuacleotides, antibodies against human ovarian antigens, and the use of ovarian antigens, antibodies against human ovarian antigens, and the use of ovarian antigens, and preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, oplycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infertions (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastltis, ophoritis and immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders, espiratory disorders (e.g., anaemia), cardiovascular disorders, espiratory disorders (e.g., anaemia), cardiovascular disorders, espiratory disorders (e.g., anaemia), cardiovascular disorders) and urinary system disorders. Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the

sequence data for this patent did not form part of the printed tion, but was obtained in electronic format directly from WIPO specification, but was obtained in electroni at ftp.wipo.int/pub/published\_pct\_sequences.

It was isolated from a placental cDNA library using a probe based on an unidentified collagenous protein and a probe based on mouse alpha-1 cDNA clone mc19. A claimed plasmid comprising alpha-1 collagen nucleic acid and an expression control sequence can be used to express recombinant collagen in prokaryotic or eukaryotic (especially mammalian) host cells. The collagen may be used to treat a patient suffering from a disease associated with degradation of cartilage, and for supplementing

mammalian endostation. The method comprises identifying unmerlies or mammalian endostation. The method comprises identifying unmerlies or having atomic coordinates with non-trivial similarity to selected coordinates of a mammalian endostatin involves (a) providing a library of atomic coordinates of compounds in a library of candidate compounds in a library of candidate compounds in a library of candidate compounds on the basis of selecting from the library at least one candidate compound on the basis of selecting from the library at least one candidate compound on the basis of selecting from the criteria which include similarities between the atomic coordinates of the mammalian criteria which include similarities between the atomic coordinates of the endostatin. The invention also describes the use of an anti-angiogenic fragment of endostatin comprising a domain selected from a heparin comprising and main exposed on alpha-helix A domain, and a carbohydrate recognition domain (CRD) domain. The methods can be used for treating endostatin minits. The compounds identified can be used for treating undesired anglogenesis, e.g. tumours. This sequence encodes human alphal(XVIII) collagen which is used in the description of the method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drug toxicity, drug efficacy and drug metabolism.

A cDNA clone (AAT84485) codes for a mouse novel type alpha-1 (XVIII) collagen (AAW26328) that is expressed in multiple organs, especially the liver, lung and kidney. It was isolated by screening murine 15.5- and 17.5-day embryo libraries with probes based on murine type XII collagen and on human alpha-1 collagen cDNA. Isolated nucleic acids can be used to express recombinant alpha-1 collagen in transformed host cells. Claimed nucleic acid (see AAT84484) coding for human alpha-1 collagen (AAW26327) can be used to treat patients suffering from diseases associated with degradation of cartilage, and for supplementing collagen.

Nucleic acid encoding human alpha-1 collagen - for production of recombinant alpha-1 collagen, for use in the treatment of cartilage

Disclosure; Fig 2; 35pp; English.

```
nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine angiostatin, human or murine endostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of phthalmological activity. The vector is used in gene therapy for expresses an anti-angiogenic, cytostatic, anti-diabetic and inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient.
                               Plasminogen; human; angiostatin; endostatin; gene therapy; collagen 18; anti-angiogenic; attenuation; cytostatic; anti-diabetic; ophthalmology; tumour growth; solid tumour; diabetic retinopathy; retina; vector; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP4328) and to CDNAs encoding them (ABD54131-ABQ56305), and also encompasses polypeptides 99% identical and polybucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens to polymucleotides, antibodies against human ovarian antigens, and the use of ovarian antigens prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or preventing varian cancer, and breast cancer, and metastatic tumours of ovarian or sorgin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polyoystic ovary syndrome, ovarian cysts, and dysmenorinees), endocrine disorders, infections (e.g., chlamandyla, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders cand urinary system disorders. Ovarian antigen polypoptides and polynucleotides may also be used in screening for compounds which the ovarian antigen polypoptides may proceed the process of the polynucleotides may also be used in screening for polynucl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the obtypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ouery Match 4.2%; Score 35; DB 24; Length 4875; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-SEP-20
  AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-deived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK64942 to AAK67950 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human immune/haematopoietic antigen genomic sequence SEQ ID NO:38594.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 38594; 3071pp + Sequence Listing; English.

ARK54951 to AAK64702 encode the human immune/haematopoietic antigen (1)
amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vaccine production. (1)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (1) expression. For
example, they may be used to treat disorders associated with decreased
cxpression by rectifying mutations or deletions in a patient's genome
that affect the activity of (1) by expressing inactive proteins or to
supplement the patients own produce the secreted (1), by inserting
polynucleotides may be used to produce the secreted (1), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (1) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.

Sequence 6774, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1999-07-18
PRIOR FILING DATE: 1999-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 6774
LENGTH: 741
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  137 CCCACACCCACCAGGACTTCCAGCTGGTGCTGCACCTGGTGGCCCTGAACAGCCCGCAGC 196

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
SEQ ID NOS: 33142
